CASE STUDY

The Project

Through a competitive tender process, we were awarded a number of boiler room upgrades across various specialist healthcare facilities including Sunshine House, Miranda House and Townend Court for the Humber Teaching NHS Foundation Trust.

Across the 3 sites we carried out the replacement of 10 boilers acting in the role of principal contractor delivering the primary mechanical objectives whilst managing and co-ordinating associated specialist sub-contractors for electrical and BMS works.

The projects were completed in accordance with the tender specification and on time to meet a restrictive delivery programme.

Value: £250,000

"These schemes formed part of the Trust Critical Infrastructure works for last financial year and were extremely important to ensure continuity of service and delivery from the sites following a number of breakdowns due to aged plant.

I have been very impressed with the professionalism and level of service received.... I have found you have a fair, balanced and honest approach and have actively worked alongside myself and the respective sites to ensure smooth delivery. You delivered all of the projects within our project programme timescales which was a key requirement for the respective projects.

Where issues occurred during works you responded to these quickly and professionally. I also feel that the quality of install and end product are extremely good. "
