CASE STUDY

The Project

Acting in the role of both Principal Contractor & Designer, we delivered the installation of 170kW of solar PV across both the main and stores roof of KCOM's Salveson Way site in Hull. The system comprised of more than 500 365W solar edge panels, associated roof mounting systems and 4 inverters.

The system was designed by our in house team with the use of Solar Edge designer to show projected monthly yields and energy / carbon reduction, maximising coverage and output within the clients budget.

Solar Edge optimisers were also included within our solution to enable comprehensive performance monitoring of the system.

Value: £225,000
